

Through innovation and design our Care Plan Manager software enables centers to overcome challenges and enhance care performance when assessing, planning and tracking data imperative to a participant's well-being.

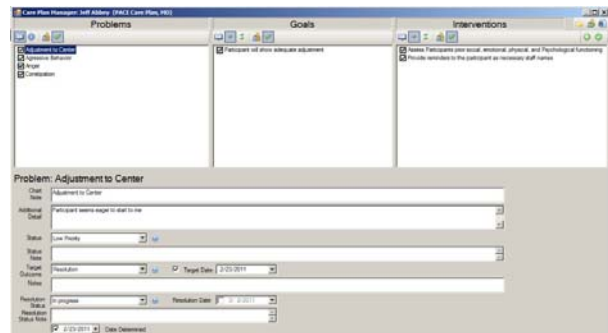

Care Plan Manager

When managing Care Plans, the need to have valuable resources in place is essential. Each discipline needs a reliable note taking and tracking system to better prepare and develop a comprehensive Care Plan for each participant in their care.

Care Plan Manager is designed to house and report important data and protocols that allow users to properly create and evaluate treatment plans. As a discipline, you will be able to review and work with three key areas of the participant's chart; **Problems, Goals and Interventions.**

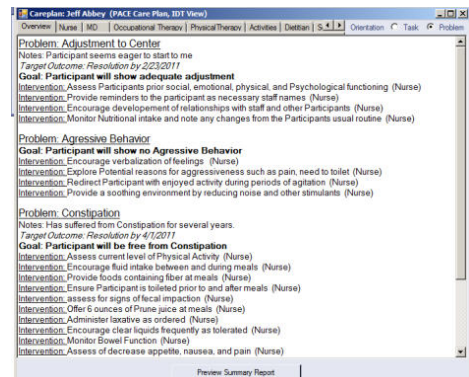

Each of these elements contain valuable notes that become fundamental when developing an assessment as they function together to provide a complete care evaluation.

A great advantage of using the Care Plan Manager is that it works seamlessly with the Centricity® Electronic Medical Record. Centricity EMR considerably aids in creating a well-developed plan of action for the participant by allowing you to view the entire chart at any given time.

Care Plan Manager permits all disciplines the access to Preventative Care Reminders that enables them to take preventive measures by capturing required data they need to present to the IDT Team. This collection of data will help the team of disciplines decide the overall and complete Care Plan.

Having your team access critical data is an essential factor in your position. Our system keeps the IDT Team abreast of the participants' active care plan and enables the disciplines to make recommendations for future care plans.
