

Participant Activity Tracker

Collecting and tracking participant data within your PACE organization is crucial to effectively running your center. Having the proper tools in place is fundamental in the process of data capture and reporting information to members of your IDT, the participant's family members and of course CMS.

Virtual OfficeWare has developed comprehensive, yet practical technology to help facilitate the needs of PACE Centers. Participant Activity Tracker is designed to simplify the management of the participants' everyday activities as well as allowing easy access to accurate, reportable data. This solution allows disciplines to capture and log specific data relative to the participants' activities of daily living and whereabouts. Through our technology the IDT will be able to track, trend and shape care assessments, which will positively impact the participants' well-being.

Participant Activity Tracker is an all-encompassing software program allowing your center to be in better control of your organization's routine tasks and responsibilities in relation to participant care. Working alongside PACE Centers has increased our awareness and knowledge of what your team seeks to produce effective outcomes.

We have developed our software program to include the following features to help enhance your efficiency...

Features/Functions

- Receive advanced technology with Wander Management
- Track accurate participant costs
- Obtain accurate active participant rosters quickly
- Gather early detection of symptoms through ADL Threshold Tracking
- Generate letter templates on ADLs to share with caregivers and family members
- Receive precise reporting functionality - Accurate Reporting

Elopement Resolution

***NEWS ALERTS!**

"Top DE court upholds \$13 million dollar award in Alzheimer's Patient death" This was in addition to \$5 million dollar settlement for punitive damages.

UPMC Settles Elopement Case Out of Court for over twice the national average.

Avoid Being A Statistic...

Ensure the safety of participants through innovative measures. Utilizing technology that supports and manages the prevention of elopement is essential to set your center apart from other organizations that have raised concerns over elopement issues and/or help grow elopement statistics.

Our solution incorporates RFID (Radio Frequency Identification) technology, which greatly assists in maintaining the security and safety of your participants whether it is on-site or off-site of your premises.

RFID offers real-time monitoring, which seamlessly integrates with Participant Activity Tracker. Your disciplines can accurately capture, track and report participant data conveniently and efficiently. Participant Activity Tracker technology fully supports elopement prevention, helping your facility to improve elopement policies, measures and assessment planning.

Coupled with an extra security feature known as the “panic” button, participants can quickly communicate the need for help in a crisis to the IDT. Through an instant transmission signal your care team is alerted and can act responsively and quickly to the needs of the participant.

Participant Activity Tracker provides the tools necessary for you to decrease the risk of elopement, injury, and unusual occurrences and helps foster a nurturing, efficient and proactive environment.

The advanced capabilities of Participant Activity Tracker delivers an all-inclusive solution increasing efficiency and enhancing quality assurance within your center.
