

# QuickPay+

QuickPay+ is our enhanced version of our original QuickPay product, which was designed to allow prompt and secure payment entries through your Centricity Practice Solution. By using the base QuickPay product, users can quickly post a single payment against a current patient visit as well as prior visits with outstanding balances, display balances for all outstanding tickets on a patient's account, print receipts, and also

gain protection against fraud since QuickPay provides an alternative to the full Centricity payment posting component for front desk users.

Our advanced model extends the basic functionality of QuickPay by enabling practices to secure patient payments at the point of care. Our application allows for three important steps to occur; **calculation, validation and collection**. Each of these steps are crucial elements in determining what the patient owes for a visit and collecting the amount owed. We help to streamline new processes into your practice's workflow enabling your front desk staff to increase patient collections at the point of care. By asking your patients to pay at the time of service, whether it be cash, check or credit/debit card you will proactively decrease, if not eliminate, patient debt.

QuickPay+ will help strengthen your cash flow by allowing your practice to collect nearly 100% of your reimbursements within a 24-48 hr period. Depending on the preference of your office and patients, you will be able to secure immediate transactions at the point of service or obtain patient authorization to accept their payment at a later date—known as a delayed settlement transaction.

Your practice will enjoy the increase in your revenue stream while your patients will enjoy not having to receive confusing statements; many of which are not understood or simply ignored. Break away from the current statistics showing that 50% of your patient bills will not be collected after patients leave your office.

## Benefits and Value:

- **Secure patient payment at the time of service**
- **Eliminate patient bad debt**
- **Greatly reduce administrative costs**
- **Post payments against multiple visits with a single mouse click**
- **Display balances for all outstanding tickets on a patient's account**
- **Review and run patient financial reports online**
- **Increase patient appreciation and satisfaction**
